

Unplottable

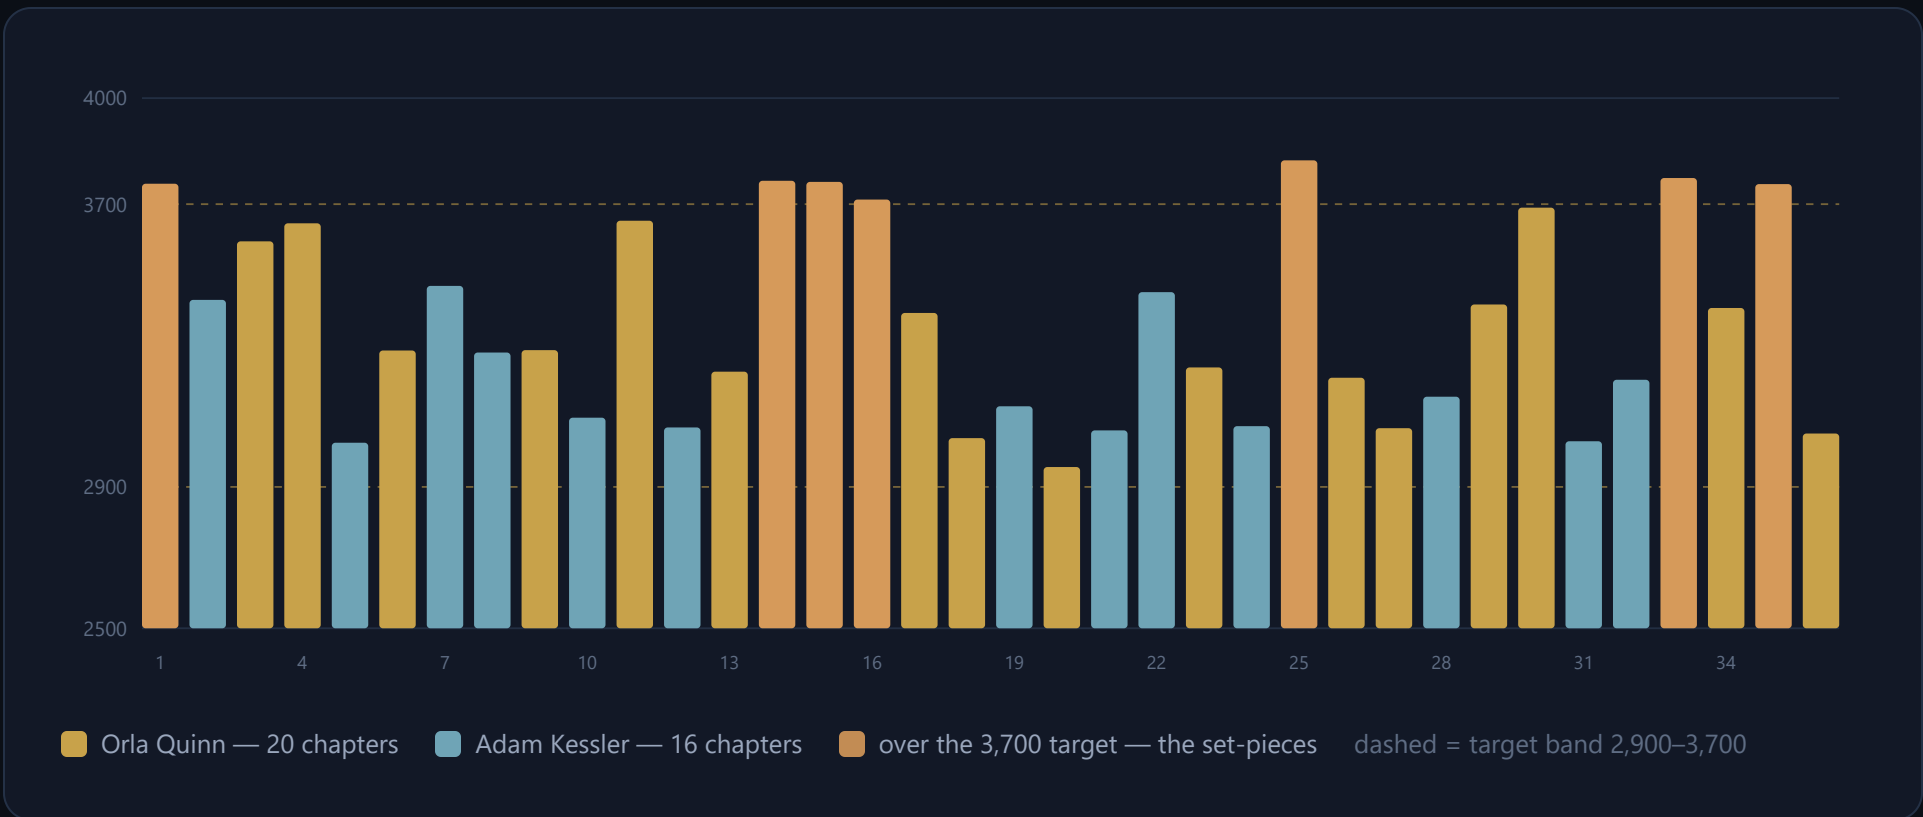

an ~118k-word novel, assembled one prompt at a time

A ~124,600-word original science-fiction novel set in the Harry Potter universe, drafted chapter by chapter with a bible-first method and a quality gate that had to run green before every commit. Every figure below is read straight from the git history and the manuscript.

The manuscript

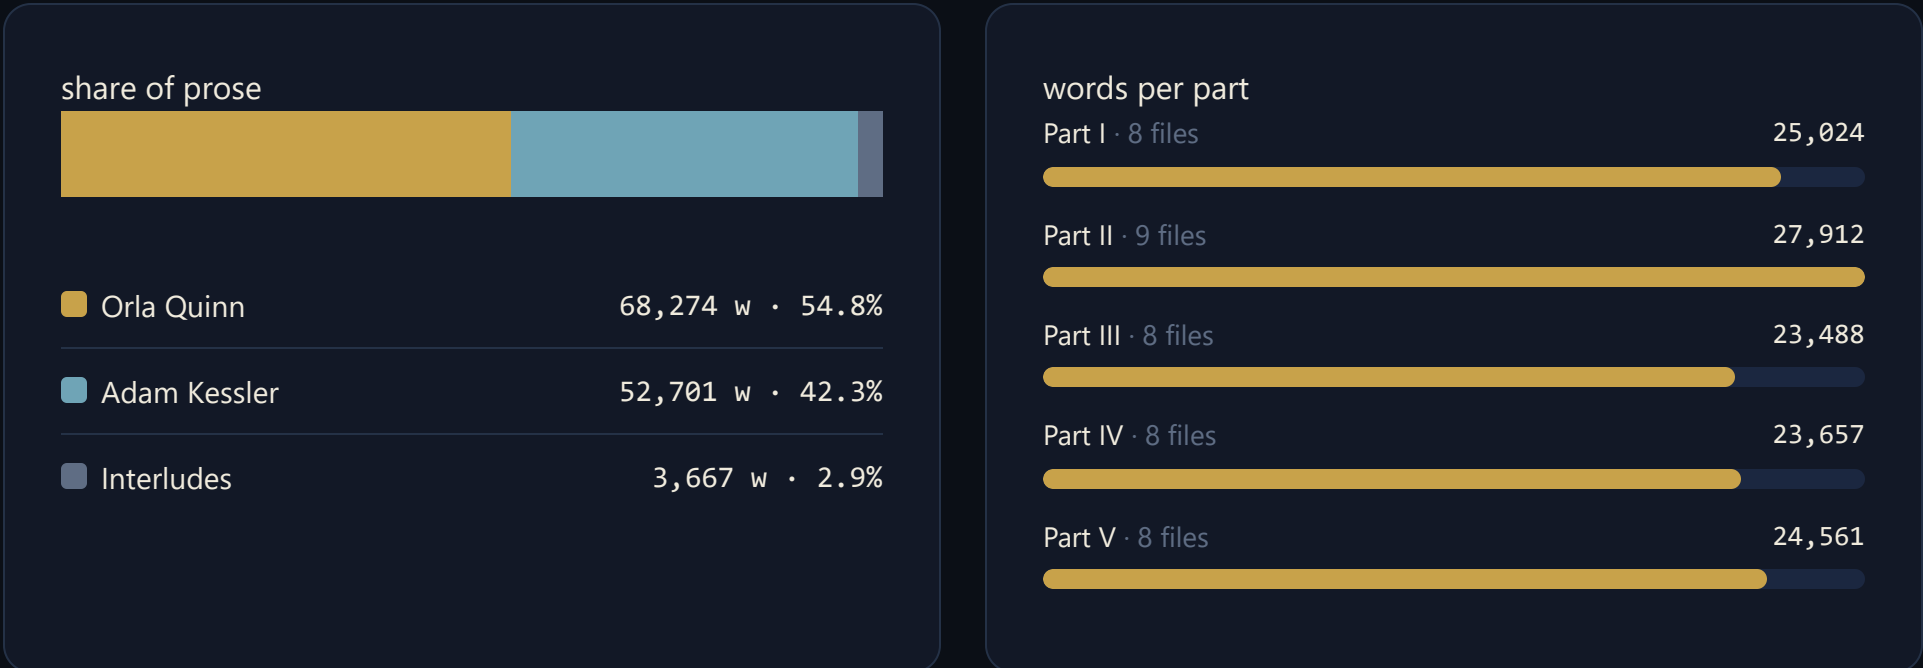

36 CHAPTERS · WORD COUNT · COLOURED BY POINT OF VIEW

Average chapter	3,360 w	5 interludes (in-world documents)	3,667 w
Shortest — ch20 <i>The Manor</i>	2,956 w	Average interlude	733 w
Longest — ch25 <i>The Apprentice</i>	3,824 w	Chapters + interludes	41 files
Inside the 2,900–3,700 target	29 / 36	Foreshadowing plants & payoffs	18 / 18
Outside the hard 2,500–4,000 band	0	Major twists tracked (T1–T5)	5

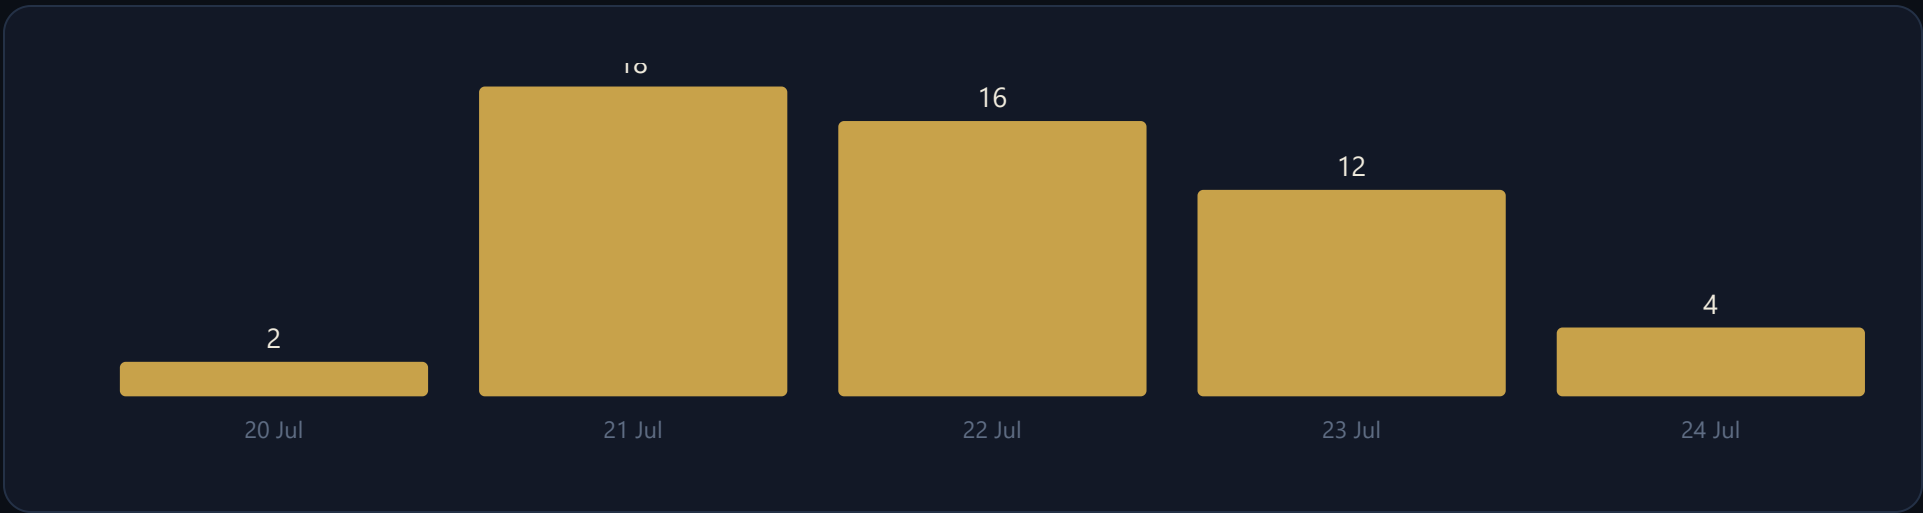

Two heads, one book

DUAL POINT OF VIEW · SHARE OF PROSE · BALANCE ACROSS THE FIVE PARTS

The build

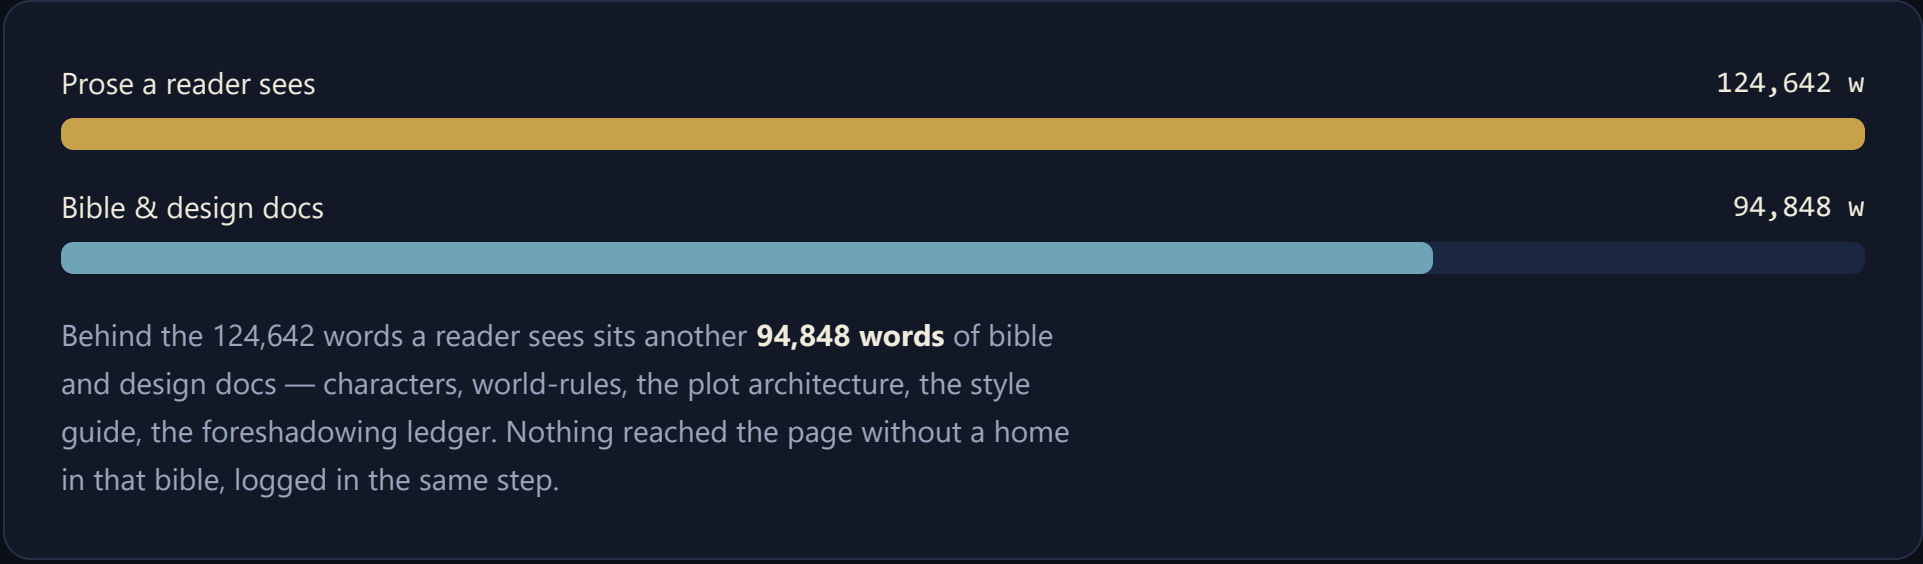

20–24 JULY 2026 · ~3.6 DAYS · 52 COMMITS

RESEARCH	SETUP	DRAFT	REVIEW	EDIT & SHIP
canon + world + landscape	premise → grid → tooling	36 chapters + 5 interludes	five per-part panels	structure, line, canon, typeset
4 prompts	6 prompts	~30 prompts	5 prompts	8 prompts

The iceberg

THE VISIBLE NOVEL · AND THE WORLD-BIBLE BENEATH IT

On tokens. Per-prompt token consumption was **not** tracked in the repository — git records prose and decisions, not model usage. As a floor, the 124,642 words of final prose ≈ **166k output tokens**; but redrafts, the 94,848-word bible, the five review panels and every tool call make true consumption a large multiple of that. Real token telemetry would have to come from the Claude Code session logs, not from git.

In-story span. 22 March 2033 → 4 February 2034 — about ten and a half months, told across five parts. Git: +10,480 / −720 lines over 52 commits. One redacted cell on the map: .
